Greetings,

I am reaching out for consideration in your Firmware Engineering role in Everett, on review I match your needs well and am available now to begin work.

My academic background prepares well for success in the firmware tasks for this role, completing specializations for Control Systems and Embedded Firmware at the University of Washington. I studied further here too, driven with a curiosity and passion for results also completing the Analog specialization for Electrical Engineering and System Dynamics for Mechanical Engineering. This combination matched with my high-volume product experience for Intel presents magniX a platform for reliable & consistent firmware results -

Qualifications Summary:

- Ownership Lead of design/fw/test/cert for Intel RFID
- Bring-up My sweet spot at Ergsense & Intel, and w/Intel Labs
- Experience 6 yrs experience in embedded IIOT electronics
- MVP IIOT pump bearing optimization solution
- C/C++ Bare-metal, low-power & embedded RTOS experience

I am excited for the chance to show more through work with your team, please contact my references for discussion. Thank you for your time in consideration, please let me know if you have any questions

Sincerely,

Justin Reina
